

Stephen Smith

AI Trainer & Technical Data Specialist

Code Generation Review • LLM Evaluation • RLHF & Preference Data • SWE-bench Style Evaluation • Red Teaming • Function Calling • Reasoning Step Verification • Supervised Fine-Tuning

| Remote / Global Availability

Professional Summary

Results-driven Full-Stack Developer and Technical AI Contributor with 4+ years building scalable web applications, secure APIs, and optimized codebases for U.S. clients and startups. Expertise in Python, JavaScript/TypeScript, React.js, Node.js, RESTful APIs, and databases (MongoDB, PostgreSQL, MySQL). Proven strength in rigorous code review, bug detection, refactoring, security analysis, reasoning verification, and high-accuracy evaluation directly transferable to Turing's coding datasets, SWE-bench++ evaluations, Chain-of-Thought (CoT) coding traces, function-calling agent training, RLHF preference data, hallucination audits, and red teaming.

Skills

AI Training & Data Annotation

- Code Generation Review
- SWE-bench Style Evaluation
- Chain-of-Thought (CoT) Traces
- Function Calling Annotation
- Reasoning Step Verification
- RLHF Preference Ranking
- Hallucination Audits
- Red Teaming
- Supervised Fine-Tuning Data Preparation
- UI-Based RL Environments

- MCP Function-Calling Support

Technical

- **Languages:** Python, JavaScript (ES6+), TypeScript
- **Frameworks:** React.js, Node.js, Express.js
- **Backend & APIs:** RESTful APIs, JWT/OAuth, Third-Party Integrations
- **Databases:** MongoDB, PostgreSQL, MySQL, SQL Optimization & Indexing
- **Tools & Methodologies:** Git/GitHub, Agile/Scrum, Jira, AWS (EC2, S3), Figma, Debugging & Performance Profiling

Professional Experience

Freelance Full-Stack Developer

Upwork

(Remote, United States)

February 2021 – February 2022

- Developed 15+ custom full-stack applications for U.S. clients using React.js, Node.js/Python, MongoDB/PostgreSQL, and MySQL, with rigorous focus on code correctness, security best practices, data validation, and performance optimization.
- Conducted thorough **code reviews, bug detection, refactoring, and reasoning verification** on complex codebases — skills directly applicable to SWE-bench style evaluations and code generation review tasks.
- Built secure RESTful APIs with JWT/OAuth authentication, third-party integrations, and strict input/output validation to ensure high data integrity and reliability.
- Collaborated closely with clients through Agile sprints to gather requirements, iterate on features, and deliver production-ready solutions with exceptional accuracy and minimal defects.
- Performed systematic debugging, caching implementation, database query optimization, and performance profiling, resulting in faster, more scalable applications.

Freelance Full-Stack Developer

Toptal (Remote, United States)

April 2022 – March 2023

- Engineered scalable enterprise-level solutions and performed in-depth security reviews, code refactoring, and performance tuning for high-profile U.S. clients — highly transferable to function-calling agent evaluation and RL environments.
- Led frontend development with React.js and TypeScript, creating pixel-perfect, accessible, and responsive UIs using modern CSS frameworks while maintaining clean, maintainable code.
- Designed and implemented robust Node.js/Express backends with database integration (MongoDB/PostgreSQL), cloud deployments (AWS EC2, S3), and third-party API integrations.
- Improved overall code quality and efficiency through systematic debugging, optimization strategies, and comprehensive testing — experience ideal for creating high-quality preference ranking and CoT training data.
- Delivered multiple complex projects on time while upholding enterprise standards for reliability, security, and documentation.

Freelance Full-Stack Developer

Arc.Dev / Independent Client Projects

(Remote, United States)

June 2023 – March 2024

- Built and maintained full-stack SaaS prototypes and custom software for small-to-medium U.S. businesses (booking systems, content management tools, real-time features), managing the complete development lifecycle.
- Conducted internal code audits, reasoning verification, and quality assurance within Agile teams — directly relevant to Chain-of-Thought traces, hallucination audits, and coding agent training.

- Handled UI/UX wireframing in Figma, frontend implementation (React.js, HTML5/CSS3/JavaScript), backend logic (Node.js/Python), database design, and deployment pipelines.
- Ensured cross-browser compatibility, SEO best practices, security hardening, and data integrity across concurrent projects while meeting tight deadlines.
- Focused on iterative development with precise requirements gathering, resulting in high client satisfaction and robust, maintainable codebases suitable for supervised fine-tuning datasets.

Full-Stack Developer

Nexlify Solutions

(Startup, New Jersey, United States)

June 2024 – November 2025

- Owned the full development lifecycle for internal tools and client-facing SaaS prototypes, emphasizing integrity, API validation, cross-functional compatibility, and production-grade quality
- Designed and implemented modern React.js + Tailwind CSS user interfaces with strong focus on intuitive flows, accessibility (WCAG), responsiveness, and performance.
- Developed secure Node.js/Express backends with MongoDB, incorporating real-time features, optimized queries, indexing strategies, and robust error handling.
- Collaborated in a small Agile team to rapidly prototype and iterate features while maintaining high code quality, documentation, and reliability standards.
- Contributed to early-stage product development by identifying edge cases, performing security reviews, and optimizing performance — skills critical for red teaming, reasoning step verification, and RLHF data creation.

Education

Associate Degree in Computer Science

Ocean County College, Toms River, New Jersey

Graduated: 2025
